PROFESSIONAL SUMMARY

Performance-driven Cloud DevSecOps Engineer and validated vulnerability researcher specializing in the orchestration of secure, high-availability multi-cloud ecosystems. Expert at integrating Generative and Agentic AI workflows into CI/CD pipelines, automating Zero Trust architectures, and conducting deep-dive web application security testing. Credited by global enterprises including Zoho, Dropbox, and Atlassian for critical Broken Access Control (BAC) disclosures.

CORE COMPETENCIES

- **Cloud Platforms & Orchestration:** AWS (EKS, Lambda, EC2, IAM, GuardDuty), Azure (AKS), GCP (GKE)
- **DevSecOps & Automation:** CI/CD (GitHub Actions, Jenkins, GitLab), IaC (Terraform, CloudFormation), Ansible
- **Security Automation & Architecture:** Zero Trust, Istio Service Mesh, SPIRE/SPIFFE, HashiCorp Vault, OPA (Rego)
- **Vulnerability Research:** Broken Access Control (BAC), WSTG, Web Pentesting, Compliance (HIPAA, ISO 27001)
- **Observability & Telemetry:** Prometheus, Grafana, ELK Stack, Fluent Bit, Loki, SIEM

PROFESSIONAL EXPERIENCE

Lead Security Architect | GRNZ Tech

10/2025 – 05/2026 * **Accomplished enterprise-grade web application security testing**, delivering critical strategic vulnerability mitigation for corporate clients **by leading R&D teams and orchestrating cross-functional penetration testing simulations.**

- **Optimized application defense cycles**, reducing potential security exposure across target infrastructures **by implementing advanced security automation methodologies and real-time posture assessments.**

DevSecOps Engineer (Project-Based) | SourceCode Academia

09/2025 – 11/2025 * Prevented permanent account destruction and mass profile modifications across core application platforms by identifying and exploiting critical Broken Access Control (BAC) parameters during infrastructure-wide security reviews.

- **Accelerated compliance verification tracking**, mitigating high-consequence corporate runtime liabilities **by architecting automated custom validation frameworks tailored to target infrastructure environments.**

DevOps Engineer | Al Nafi Cloud

12/2023 – 07/2025 * Reduced manual cloud infrastructure deployment times by 40%, provisioning multi-tier cloud environments by writing modular, reusable Infrastructure as Code templates with Terraform and AWS CloudFormation.

- **Enhanced compliance velocity and continuous security validation checks**, ensuring zero production configuration drift **by integrating DevSecOps guardrails directly into automated Jenkins, GitHub Actions, and GitLab CI/CD pipelines.**
- **Achieved 99.99% system runtime availability**, stabilizing high-traffic application frameworks **by architecting multi-region containerized workloads within Amazon EKS and Docker environments.**
- **Optimized multi-tenant cloud storage latency**, cutting operational data container overhead costs **by designing cloud-native solutions across AWS S3, EFS, ECS, ECR, GuardDuty, and Lambda.**

FEATURED ENGINEERING PORTFOLIOS

Multi-Cloud Zero Trust Healthcare Infrastructure Automation (Azure & GCP) * Enforced a rigid strict-isolation Zero Trust environment, passing rigorous mock HIPAA and ISO/IEC 27799 auditing compliance metrics by deploying an Istio service mesh integrated with SPIRE workload identification and HashiCorp Vault dynamic secret token rotation.

- **Eliminated multi-cloud configuration drift**, automating synchronized clusters across Azure AKS and Google GKE **by provisioning declarative infrastructure architecture blueprints utilizing Terraform and custom Helm charts.**
- **Automated granular identity validation**, logging 100% of mutual TLS handshakes **by constructing fine-grained Open Policy Agent (OPA) rules with Rego, paired with an aggregated Fluent Bit and Loki telemetry pipeline.**

Enterprise GitOps & Hybrid CI/CD Pipeline (AWS EKS & Jenkins) * Achieved true continuous delivery with zero-downtime rolling updates, eliminating manual configuration shifts by architecting a GitHub-triggered web-hook pipeline that containerizes builds via Jenkins, pushes to Amazon ECR, and syncs via ArgoCD inside AWS EKS.

- **Guaranteed absolute data persistence survivability**, surviving unexpected state pod restarts **by mapping stateful database pods using Kubernetes Persistent Volume Claims (PVC) back to an Amazon EFS storage engine via a custom StorageClass.**
- **Reduced mean-time-to-detection (MTTD) of pipeline anomalies**, providing explicit cluster component transparency **by engineering an observability stack using Prometheus, Grafana dashboards, and explicit Kubernetes Role Bindings.**

VULNERABILITY RESEARCH & ACKNOWLEDGMENTS

- **Zoho Corporation:** Formally listed in the official Hall of Fame after identifying, verifying, and disclosing high-severity logic bypass vulnerabilities.
- **Atlassian Ecosystem:** Documented and reported structural authorization flaws within target application logic boundaries.
- **Dropbox, Inc.:** Validated and rewarded under responsible disclosure rules for uncovering critical application parameters.

EDUCATION & CERTIFICATIONS

- **BSc Equivalent Diploma in AIOps (Artificial Intelligence Operations)** – EduQual Scotland, UK (RQF Level 6 Certified)
- **3x AWS Certified** (Professional & Associate Tracks)
- **1x Google Cloud Certified** (Professional Track)
